Introduction

The Smart Report PRO is an innovative tool designed to enhance the Biofeedback process by providing a comprehensive and accurate picture of a client's session. Utilizing advanced AI algorithms, this simple yet powerful report function serves as a valuable advisor, delivering results that are both easy to use and interpret. The Smart Report PRO not only analyzes trends of improvement, but also offers a high degree of personalization and adapts to the unique needs of both the practitioner and the client.

With the ability to search for any item of interest in the past sessions, the Smart Report PRO allows practitioners to gain a deeper understanding of their clients' progress. By analyzing trends and patterns, the report provides an average of improvement across important areas, as well as insights into how risks, matrix items, emotions and other factors evolve over time.

Additionally, the Smart Report PRO is designed to ensure that no stress issue goes unnoticed. By highlighting items or categories that appear in the highest risk areas, it helps practitioners to quickly identify and address potential problems.

The Smart Report PRO is a perfect match for practitioners who seek to combine their intuition, knowledge, and experience with the power of AI. It is an invaluable tool that helps practitioners to make informed decisions and provide the best possible care for their clients.

What does the OMNIS Smart Report Guarantee?

Client Engagement

Our software makes health information visual, simple, and engaging, helping you provide better health outcomes. Your clients' reports and comprehensive history available at your fingertips. Review your clients' health reports anytime during your session.

Your Own Client Database

It takes less than a minute to add a new client to your OMNIS Software, automatically recognized by the Smart Report.

Access Client Data Anytime

The Smart Report provides secure storage for your clients' health data. The information obtained during your session is securely accessible to you at any time you need it.

Live Consultation Notes

The Smart Report offers you the chance to log your Notes while running the Biofeedback session, making sure you do not miss an insight, an update or any important information shared or discovered during the session. The Live Notes are automatically saved and available in the Smart Report.

How does it work?

The Smart Report PRO is designed to be an effortless addition to your consultation process. It runs seamlessly in the background while you conduct your session, gathering and analyzing data without any additional action required on your part. Once you've completed the session, including Current Rectifications, you can easily access the report by simply going back to the OMNIS main panel and clicking on the Smart Report button. This will give you a comprehensive and accurate picture of your client's session, making it easy to understand and interpret the results.

CLOSING THE SESSION

Report

Create Smart Report

Electrode Check

There are several options on the left, we recommend you go through all of them and make selections as you see fit for your current client. But don't you worry! Even if at this moment you only choose a few options for your report today, you can come back anytime and access all the data you need! The Smart Report saves everything and shows exactly what you need at that specific point in time.

1

QX Smart Report

The QX logo serves as a versatile menu icon, allowing you to easily switch between extended and reduced views. In reduced view, the icons are condensed for a cleaner and more streamlined look. Hovering over the icons will reveal the name of the current sub-menu, so you can quickly and easily navigate to the feature you need.

Done

* Note that if more options are selected, you could see duplicated items. E.g., BACH FLOWER ROCK ROSE is included in the Back Flowers subfilter, but it can also have a high reactivity as well and be included in Matrix Top 30.

*Note that the “–” button allows you to remove a selected item from all previously made choices.

EEG and ECG Measurements

Record the Pre and Post EEG and ECG Measurements performed in the OMNIS Session, right after Calibration, and at the end of the session in the EEG/ECG/GSR Panel.

*For convenience, the feature includes a Select All button to mark all choices at once and a Select None button to deselect all choices.

In Depth Reactions

The In-Depth Reactions tab within the Smart Report PRO provides a summary of the client's resonance and reactivity scores, as well as the categories and charts from the OMNIS software. This feature allows practitioners to gain a deeper understanding of the client's reactions and track progress over time.

8

Session Highlights

The Session Highlights is a feature designed to provide practitioners with a comprehensive understanding of the vast amount of data collected by the OMNIS during a Biofeedback session. It is specifically tailored to help practitioners identify important trends or patterns in the data, such as specific items, categories, or behaviors, as well as the most or least reactive elements. Additionally, it allows practitioners to analyze the data over a specific period of time, providing valuable insights into the client's progress.

Session Average Perspective, Category View

This feature allows for searching for the most and least reactive items within a specific category, such as organs or emotions, for the current client. This function can be applied to all sessions, the last x number of sessions, or within a specified time interval. This feature provides a useful tool for identifying patterns and trends in the client's reactions, which can aid in the decision-making process for their care.

Session Highlights, Targeted View

The Targeted View feature in the software is a powerful tool that allows users to easily analyze and understand data from all sessions in a measurable, visual, and easy to understand format. By searching for specific items of interest, such as "liver" in the dataset of Aggravations or Isodes, you can quickly and easily identify patterns and trends in the client's condition. This function can be applied to all sessions, the last x number of sessions, or within a specified time interval, so you can have a more focused and detailed analysis of the client's condition. It is a crucial tool for making more informed decisions about the client's care and for monitoring their progress over time. With this feature, you can easily identify any issues or concerns and take action to address them.

Timeline Visuals

The Timeline Visuals feature allows you to examine specific items and data from all or focused areas, giving you an understanding of the client's condition over time. It begins from the 5th session and is limited to searching within the data of one client. This feature is a powerful tool that can help you identify patterns and trends that may be impacting the client's health and well-being, it allows you to monitor the client's progress and take action to optimize their care.

Trends of Improvement

The Trends of Improvement feature is designed to help users uncover the root causes of stress-related issues and evaluate the effectiveness of treatment protocols. It allows users to view measurable results from the current session and track the progress of a protocol over time. This feature is an essential tool for monitoring the client's condition and making informed decisions about their care. By identifying patterns and trends in the client's health, it empowers you to take action and optimize the care plan. Whether you want to measure the success rate of the protocol, or identify areas that need improvement, the Trends of Improvement feature gives you the insights you need to ensure your client's well-being.

Category Focus

The Category View feature allows users to easily identify the underlying causes of problems by providing pre-set categories to guide their intuition. Users can choose to view reactivity scores for the highest, lowest, or specific ranges and delve into the smallest stress issues. The feature also provides the option to add or remove items from the list, allowing for a more customized and detailed analysis. This feature is a powerful tool that can help users identify patterns and trends in the client's condition and make informed decisions about their care. By using pre-set categories to guide your intuition and the ability to customize the list, you can easily uncover the root causes of problems and take action to optimize the client's care.

Rectification Insights

1. Current Session Measurable Results

The Current Session Measurable Results feature, which is part of the Rectification Insights, allows users to view and evaluate the measurable results of the current session. This feature provides an in-depth analysis of the client's condition, including specific details on the reactivity scores of individual items, needed for the client's overall progress.

2. Protocol Success rate

The Protocol Success Rate feature allows users to track the effectiveness of protocols for their clients. It provides detailed information on the success rate of each protocol, enabling users to identify areas of improvement and make informed decisions about the client's care. This feature allows users to easily see how successful the protocols are for the client and where there is room for improvement or if a different approach is needed altogether. This feature is a valuable tool for monitoring the client's progress and evaluating the effectiveness of protocols.

Most Worked On

The Most Worked On feature offers a comprehensive analysis of the stress issues that the therapist is focusing on. It allows the therapist to see which specific areas of concern they have been dedicating their attention to, whether it's for one client

or multiple clients, for a specific time period or throughout all sessions. With this feature, the therapist can easily identify patterns and trends in their work, focusing their efforts on the most crucial areas, and also identify any issues that might be overlooked, making their workflow more efficient. In summary, The Therapist Vision feature provides a valuable tool for the therapist to enhance their practice and ensure that they are maximizing their own potential.

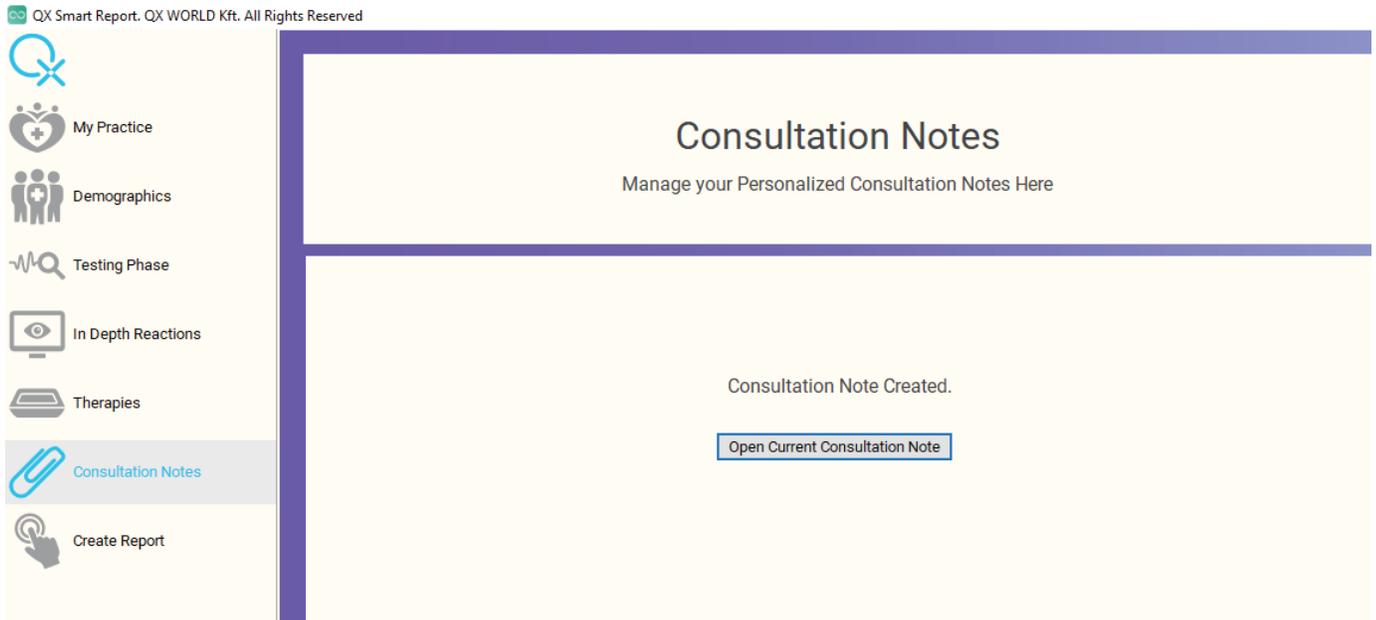

Protocol Quick View

The Protocol Quick View section of the software provides users with insights into the areas of interest that they have spent the most time on, whether it's for one client or all clients, for a specific time interval or all sessions. This feature allows users to quickly identify the areas of the software that they use most frequently, and to focus their efforts on the most important areas. It can also help identify any areas of the software that may be underutilized, so users can make more efficient use of their time and resources. Overall, this feature is a valuable tool that can help users optimize their workflow and ensure that they are providing the best possible service to their clients.

Consultation Notes – Live Notes Recorded for Added Efficiency and Personalization

The Notes feature of the OMNIS gives you the possibility to take live notes during your session, simply by using a key combination (Shift N) wherever you are in the OMNIS.

The Live Notes feature allows you to capture your thoughts, observations, and recommendations as you navigate through the OMNIS software. Accessible from any point within the program, the Live Notes panel allows you to quickly jot down notes without interrupting your workflow. Your notes are automatically saved and can be accessed again at any time using the Shift N shortcut.

These notes are specific to the patient and the date of the session and can be reviewed along with the complete report data. You also have the option to include these notes in your Practitioner Report and can access them electronically after the session. If no notes were taken during the session, you can still add them by clicking on the “Log Consultation Notes” button in this section.

The Client Report PRO

The Client Report includes the following:

Demographics:

- ✓ SOC (Suppression and Oppression to Cure) Questionnaire
- ✓ Stress and Detox Inventory
- ✓ Simple Biorhythm
- ✓ Biorhythm Trends

VARHOPE:

- ✓ VARHO Reactions (Voltage, Amperage, Resistance, Hydration, Oxygenation)
- ✓ Pp and Ep (Proton Pressure and Electron Pressure)
- ✓ Red VARHOPE Panel Electrical Reactions (Impedance, Phase Angle etc.)

Emotions: top and bottom 3 emotions, with a section for making journal entries until next session

Heavy Metals (a selected few): with an educational explanation

Minerals: (a selected few): with an educational explanation

Perverse Energies: top 3 reactions with an educational explanation

Xenobiotics: top 3 reactions with an educational explanation

Nutrition: a general nutritional educational report

Stress and Hormones: an educational report

Meridians: an educational report

Acupuncture: education on the relevant points

Aroma Therapy: education on the relevant most reactive items

Body Scan and Face Therapy: Reactivity Profile and Aura Snags

Dental Overview: Top 3 reactions from the TMJ Muscular Sarcode Panel

The Client Report has no values included, as they are indications for the Practitioner and can be confusing for our clients. The educational report will help them keep track of the most important issues in their session and come back to the next one prepared.

Once you have the Practitioner or Client Report generated, save it by using the Save Icon on the top left corner like below, and keep in your records or send it to your client electronically.

***Remember:** You can access all report data at any time during the session or after!

What areas are covered by the Smart Report?

The Smart Report was designed to automatically cover all relevant information during the Biofeedback session in most of the panels you visit, eliminating the need to save the data separately.

The Smart Report saves data automatically. How? Simply click on a button, get a result or access a panel that generates information, and that means that the Smart Report has already saved it.
